

Deneb Sector

This section contains descriptions, maps and statistics for the coreward-trailing portion of Deneb sector that once bordered the trailing wilds. Included are the following subsectors:

- Antra Subsector on page 2
- Million Subsector on page 4
- Namidshur Subsector on page 6
- Atsah Subsector on page 8

Notes

Antra subsector has benefitted greatly from the wilds reclamation project. A decade ago, the only Regency worlds in the subsector were in the Frontier zone. Now, nine worlds in the subsector have been admitted into the Regency safes and the frontier has been moved out 3-5 parsecs.

Antra subsector is protected by the 61st Fleet, formerly headquartered at **Uramid** (1910), but now at **Antra** (1808).

The Antra system has also prospered greatly with the massive influx of traffic from colonists heading to the trailing wilds. Antra's population has increased as members of the service and manufacturing industries have flocked to the world for employment opportunities.

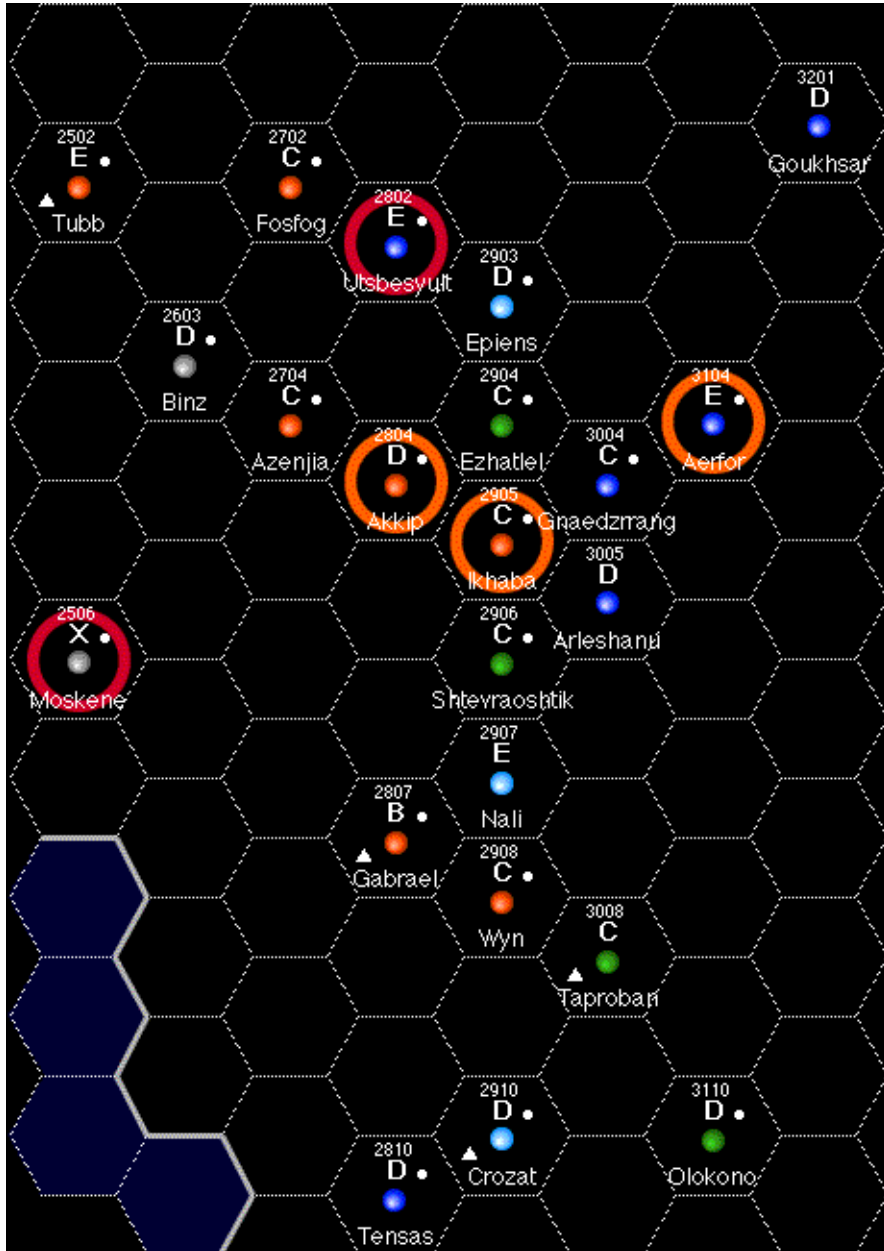

The Antran government has come under some criticism for their management of this newfound prosperity. Most forecasts eventually predict Antra will become less and less of a factor in the interface and terminus markets as the borders of the Regency expand to trailing. Rather than invest their wealth in the planet's future well being, the planet's government has continued to build the infrastruc-

ture with the expectation that the population will continue to grow.

The future looks much brighter for **Mazirbe** (2210) whose population has quinti-pled in a scant 10 years. While only a scant four parsecs from Antra, Mazirbe's fledgling government has been building its infrastructure so that once the colonial traffic has come and gone, the world will be easily retrofitted for to incorporate various manufacturing and research industries. In addition, the Mazirbe High Council has been developing civilian way stations and refueling ports at its four gas giants, thereby ensuring a strong future as a trade magnet.

Notes

Million subsector has been the primary site for relocation of Zhodani refugees who poured across the borders of the Spinward Marches in the late 1100s.

The Zhodani colony is known as The Shtievliv Theocracy. Unofficially headquartered at **Ezhatlel** (2904), this loose confederation of worlds is largely governed by former Zhodani proles who are just coming into their own independence. Charitable associations originating from Deneb's *To Will One Thing* (a.k.a., "the Willies") church have been the primary force in guiding the orphaned proles both educationally and spiritually.

In the refugee camps of the Spinward Marches, the Zhodani had largely fallen under the dominion of Vargr Pack syndicates. The resulting squallor became an eyesore on spinward worlds such as Esalin, Jewell and Efate. The Regency government sought to remove the besieged proles from this environment and give them a fresh start in the colonies. Unfortunately, the Pack has followed them and continues to vie for control of the refugee populations.

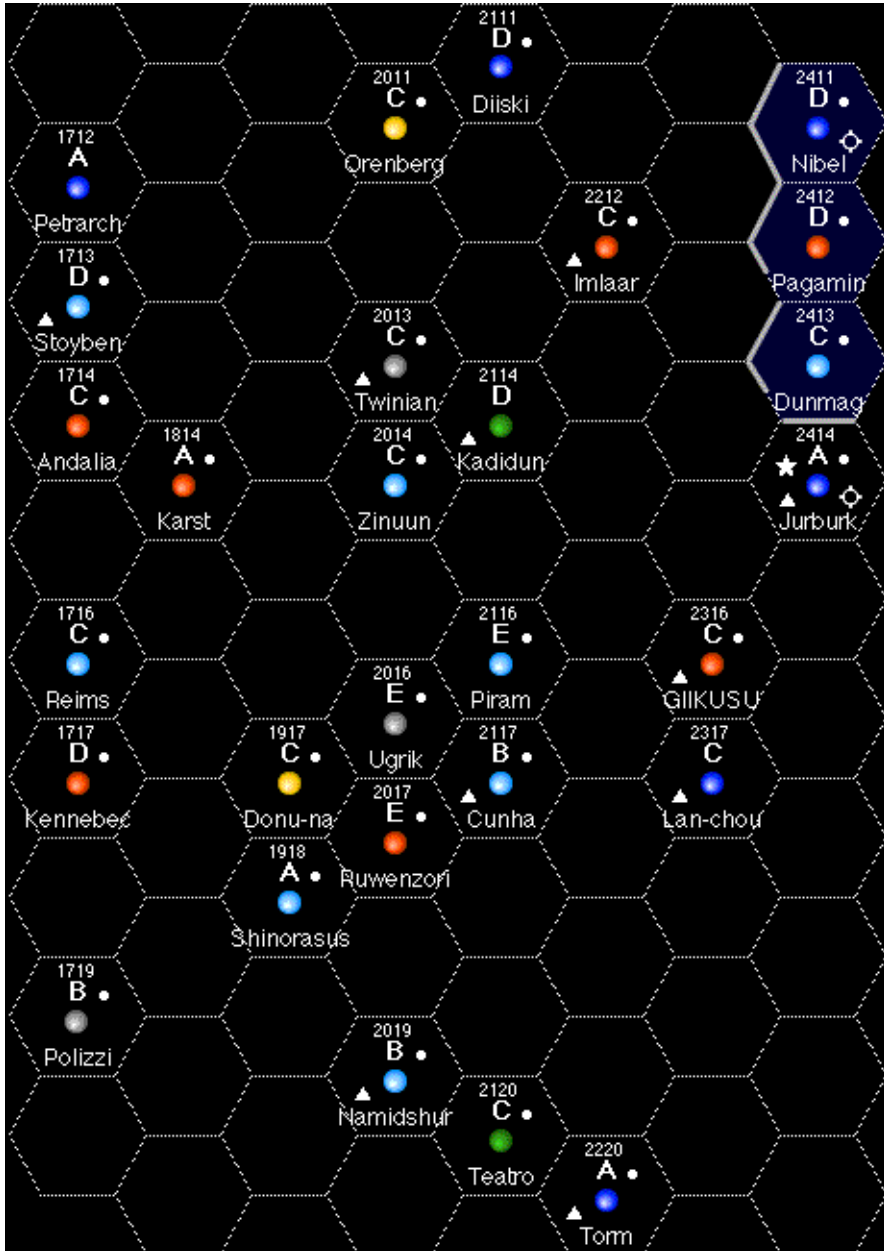

Akkip (2804) is currently governed by the senior military staff of Deneb's Society of the Will, the stoic militia arm of the "Willies." A representative democracy had been put into place after colonization, but conflict between the Zhodani and Vargr populations soon threw the government into turmoil. Revelations that the insidious Vargr Pack was establishing ties with important government offices caused open warfare in the streets of Akkip's capital city, Nienshianchia.

Peace talks between Vargr and Zhodani leaders have occurred over the last year, but as yet no resolution to the conflict has been made.

The non-Zhodani human governments of **Tensas** (2810) and **Taproban** (3008) have distanced themselves from the Theocracy government at Ezhatlel. While they still participate in the joint defense of the colonial hub, they prefer not to be embroiled in the chaos that has resulted from the attempt to give the Zhodani refugees self government.

Notes

Eight worlds have been reclaimed from the frontier in Namidshur, placing almost the entire subsector in the Regency safes for the first time in 80 years.

The subsector is protected by the 125th Fleet whose headquarters has been moved from **Shinorasus** (1918) to **Jurburk** (2414).

The Shinorasuns were all too happy to give up the naval base, having never wanted it in the first place. **Shinorasus** continues to build starships for the Regency Navy with its former naval yard, but has refitted a good portion of the yards for manufacture of civilian starships.

Research Station Gamma at **Namidshur** (2019) has had virtually all its resources directed in FTL communication development. Working in concert with some of the research firms on HRD/Vincennes, they plan to further develop the ansible technology that was first used during the Narsil Uprising. Several field tests are planned in the colonies. The Research Station's directorate was offered a lucrative contract to develop naval weaponry, but declined due to pressure from the markedly pacifistic Namidshuri population.

Donu-na (1917) has recently fallen under the watchful eye of the Regency government. Insurgent elements have made several attacks on facilities governed by the world's Sultanate. The Regency desperately wants to avoid having any major powderkegs in the region during the colonial era and has dispatched several diplomatic teams to assess the nature of the conflict.

Giikusu (2318), which was deserted by billions of people during the Abandonment, has enjoyed a wonderful renaissance in the early colonial era. Located between several minor jump-1 clusters, the world has been readmitted into the Regency safes and has once again begun to thrive.

To celebrate the colonial effort of the Regency, the Giikusan government fostered the concept for a new Regency holiday, Reclamation Day, which was first celebrated on 311-1204, marking the day in 1202 that the Regency opened its trailing borders for colonization. Reclamation Day is celebrated throughout the Regency and in some of the colonies. The day is dedicated to the brave souls who go forth into the wilds against unknown dangers and in remembrance of the Imperial citizens who were lost during the Collapse and Abandonment.

Perhaps the most amazing success story in the subsector has been that of **Jurburk**. Reclaimed from the wilds in late 1203, Jurburk quickly became the primary conduit through which traffic to the colonies has flowed.

Because of its prime location, traffic flows through Jurburk from all areas of the Regency, making it the number one port in the region. Jurburk's massive growth from frontier town to booming planetary metropolis has been a difficult transition. The best way to describe its government is directed anarchy.

Jurburk's population is over 99 percent immigrant. The clash of cultures has not always made for a cooperative mindset among the natives, but it is distinctly cosmopolitan. The Jurburkans are still finding their way at this point, seeking their own distinct identity. To outsiders, Jurburkans are almost xenophilic, welcoming them to their world gleefully. The guiding principle of Jurburk is to ensure the world's future status as a major port and trade hub.

Notes

The reclamation of many of this subsector's worlds from the wilds has resulted in the return of the Regency Navy to the region. As it was before the Collapse, Atsah is defended by the 88th Fleet, headquartered at **Errogel** (2716). The fleet returned to the subsector with much fanfare in 1205. It has been steadily been built up to defend the Regency's trailing flank.

Segan (2717) was the site of the Regency's first and ill-fated attempt to build a colonial hub. Prior to the opening of the frontier, RQS personnel were dispatched to the system to recontact the natives of the world and build a C-class starport on its surface. They were met with surprising hostility by the world's leader, a technologically elevated dictator who called himself "The Overlord." With the assistance of Jonkereen scouts and several highly regarded Regency mercenary units, the RQS had begun to stamp out the Overlord's forces.

However, the project was stricken with a second crisis when a large Vampire Fleet arrived in system and pummeled the RQS both in space and on the ground. They were forced to make a strategic retreat, but not before the starport was destroyed by orbital bombardment and a full quarter of their expeditionary fleet was destroyed.

Plans have been made to reestablish a starport on the world, but for the moment Segan is interdicted.

Yaseleo (2812) was settled by members of the Aslan Syoisuis clan in 1202. With the aid of the Regency this world, formerly known as Port Comfort, was taken forcibly from its corsair owners. This land grant was made to the Aslans in a dual effort to smooth over diplomatic tensions that had risen with the Aslan early in the decade and to provide a bulwark against Virus. The wisdom of the grant has been brought into question recently as the Aslan are beginning to make noise about acquiring additional real estate in the region.

Kiirindor (2520) is recovering from a rash of corsair attacks that occurred in the early 1200s. The attacks resulted in the destruction of much of Kiirindor's largest cash crop, narquin, a valuable spice popular among the Regency upper class.

Kiirindor is known for its high atmospheric concentration of carbon dioxide and the "glass houses" in which the majority of its inhabitants dwell. During the Abandonment, many Kiirindorians fled to colonies in the Sword Worlds. Because of the adverse political climate there and the opening of the frontier, many Kiirindorian expatriate families have returned to Kiirindor to reclaim the property of their ancestors.

The Regency maintained a naval outpost at **Errogel** during the post-Abandonment era. Soon after the Reclamation began, Errogel quickly asserted itself as a prime site for the region's flagship colonial naval base. Billions of credits later, Errogel is now the site of a powerful TL-15 naval shipyard and training base. Errogel is also the primary funnel for high-tech naval equipment that is shipped to bases in the colonies.

The Shinku Amalgamation, economically the most powerful of the trailing colonies, controls five systems in the subsector's trailing edge.
